Document: Integrate card payments with JavaScript SDK for direct merchants

Devon Apple

This documentation is for software developers wanting to add PayPal functionality to their apps.

I have rewritten more than 90% of this integration guide. The original content was provided by the product team as part of our contribution model. I reviewed the content, discussed the integration process, asked for clarifications, suggested improvements, secured consensus, aligned the content with our style guide, and improved the document for our developer audience.

This integration guide was an overhaul of an existing document, heavily modified based on customer feedback, developer testing, and new content from the product team. I worked with project manager who

The information for this integration guide was a combination of existing content and new content provided by the product team, with support from the engineering team.

This document was lightly edited by the documentation team's editor.

Code samples were provided by the product and engineering teams.

The document was produced using our documentation team's style guide, supplemented by a broader PayPal style guide and the Microsoft style guide.

This document was originally hosted in a page template that supported multiple tabs for both content and code samples. It has been altered to fit a single line of content.

This document has been designated legacy content. PayPal improved its JavaScript SDK with an improved card fields toolset.
